

DISCRETE STOCHASTIC PROCESSES
Draft of 2nd Edition

R. G. Gallager

August 30, 2009

Contents

1	INTRODUCTION AND REVIEW OF PROBABILITY	1
1.1	Probability models	1
1.1.1	The sample space of a probability model	3
1.1.2	Assigning probabilities for finite sample spaces	4
1.2	The axioms of probability theory	5
1.2.1	Axioms for the class of events for a sample space Ω :	6
1.2.2	Axioms of probability	7
1.3	Probability review	8
1.3.1	Conditional probabilities and statistical independence	8
1.3.2	Repeated idealized experiments	10
1.3.3	Random variables	11
1.3.4	Multiple random variables and conditional probabilities	12
1.3.5	Stochastic processes	14
1.3.6	Expectations	16
1.3.7	Random variables as functions of other random variables	19
1.3.8	Conditional expectations	22
1.3.9	Indicator random variables	24
1.3.10	Transforms	24
1.4	The laws of large numbers	25
1.4.1	Basic inequalities	26
1.4.2	Weak law of large numbers with a finite variance	28
1.4.3	Relative frequency	30
1.4.4	The central limit theorem	31

1.4.5	Weak law with an infinite variance	33
1.4.6	Strong law of large numbers (SLLN)	34
1.4.7	Convergence of random variables	39
1.5	Relation of probability models to the real world	42
1.5.1	Relative frequencies in a probability model	43
1.5.2	Relative frequencies in the real world	43
1.5.3	Statistical independence of real-world experiments	46
1.5.4	Limitations of relative frequencies	46
1.5.5	Subjective probability	47
1.6	Summary	48
1.7	Appendix	49
1.7.1	Table of standard random variables	49
1.8	Exercises	50
2	POISSON PROCESSES	58
2.1	Introduction	58
2.1.1	Arrival processes	58
2.2	Definition and properties of the Poisson process	60
2.2.1	Memoryless property	60
2.2.2	Probability density of S_n and S_1, \dots, S_n	64
2.2.3	The PMF for $N(t)$	65
2.2.4	Alternate definitions of Poisson processes	67
2.2.5	The Poisson process as a limit of shrinking Bernoulli processes	69
2.3	Combining and splitting Poisson processes	70
2.3.1	Subdividing a Poisson process	72
2.3.2	Examples using independent Poisson processes	73
2.4	Non-homogeneous Poisson processes	74
2.5	Conditional arrival densities and order statistics	77
2.6	Summary	81
2.7	Exercises	82
3	RENEWAL PROCESSES	92
3.1	Introduction	92

3.2	Strong Law of Large Numbers for renewal processes	93
3.3	Expected number of renewals	97
3.3.1	Laplace transform approach	98
3.3.2	Random stopping times	100
3.3.3	Wald's equality	102
3.4	Renewal-reward processes; time-averages	105
3.4.1	General renewal-reward processes	108
3.5	Renewal-reward processes; ensemble-averages	112
3.6	Applications of renewal-reward theory	117
3.6.1	Little's theorem	117
3.6.2	Expected queueing time for an M/G/1 queue	120
3.7	Delayed renewal processes	122
3.7.1	Delayed renewal-reward processes	124
3.7.2	Transient behavior of delayed renewal processes	125
3.7.3	The equilibrium process	126
3.8	Summary	127
3.9	Exercises	127
4	FINITE-STATE MARKOV CHAINS	139
4.1	Introduction	139
4.2	Classification of states	141
4.3	The Matrix representation	147
4.3.1	The eigenvalues and eigenvectors of P	149
4.4	Perron-Frobenius theory	150
4.5	Markov chains with rewards	156
4.6	Markov decision theory and dynamic programming	165
4.6.1	Introduction	165
4.6.2	Dynamic programming algorithm	167
4.6.3	Optimal stationary policies	170
4.6.4	Policy iteration and the solution of Bellman's equation	173
4.6.5	Stationary policies with arbitrary final rewards	177
4.7	Summary	182
4.8	Exercises	183

5	COUNTABLE-STATE MARKOV CHAINS	197
5.1	Introduction and classification of states	197
5.2	Branching processes	207
5.3	Birth-death Markov chains	210
5.4	Reversible Markov chains	211
5.5	The M/M/1 sample-time Markov chain	214
5.6	Round-robin and processor sharing	217
5.7	Semi-Markov processes	223
5.8	Example — the M/G/1 queue	227
5.9	Summary	228
5.10	Exercises	230
6	MARKOV PROCESSES WITH COUNTABLE STATE SPACES	235
6.1	Introduction	235
6.1.1	The sampled-time approximation to a Markov process	238
6.2	Steady-state behavior of irreducible Markov processes	239
6.2.1	The number of transitions per unit time	240
6.2.2	Renewals on successive entries to a state	240
6.2.3	The strong law for time-average state probabilities	243
6.2.4	The equations for the steady state process probabilities	244
6.2.5	The sampled-time approximation again	245
6.2.6	Pathological cases	245
6.3	The Kolmogorov differential equations	246
6.4	Uniformization	250
6.5	Birth-death processes	251
6.6	Reversibility for Markov processes	253
6.7	Jackson networks	259
6.7.1	Closed Jackson networks	264
6.8	Summary	266
6.9	Exercises	268
7	RANDOM WALKS, LARGE DEVIATIONS, AND MARTINGALES	279
7.1	Introduction	279

7.1.1	Simple random walks	280
7.1.2	Integer-valued random walks	280
7.1.3	Renewal processes as special cases of random walks	281
7.2	The waiting time in a G/G/1 queue:	281
7.3	Detection, Decisions, and Hypothesis testing	284
7.4	Threshold crossing probabilities in random walks	287
7.5	Thresholds, stopping rules, and Wald's identity	291
7.5.1	Stopping rules	292
7.5.2	Joint distribution of N and barrier	297
7.5.3	Proof of Wald's identity	298
7.6	Martingales and submartingales	299
7.6.1	Simple examples of martingales	300
7.6.2	Markov modulated random walks	301
7.6.3	Generating functions for Markov random walks	303
7.6.4	Scaled branching processes	304
7.6.5	Partial isolation of past and future in martingales	304
7.6.6	Submartingales and supermartingales	305
7.7	Stopped processes and stopping times	307
7.7.1	Stopping times for martingales relative to a process	311
7.8	The Kolmogorov inequalities	312
7.8.1	The strong law of large numbers	315
7.8.2	The martingale convergence theorem	316
7.9	Summary	317
7.10	Exercises	319
